A crime-busting electronic tag system that monitors container freight journeys throughout Europe gets its final test this week. European transport experts will be in Verona, Italy, on Wednesday, to meet a container train from Denmark as part of aBritish-led communications project. The system will provide Europe-wide surveillance and monitoring. The aim is to curb the insurance scams and highjackings that cause multi- million pound losses each year. A prime purpose of the system, however, isto help safeguard travelling conditions for perishable foodstuffs, British telecommunications firm @Cable and Wireless is the project's co- ordinator for the pounds 2.6 million scheme, funded by the European Commission's Transport and CommunicationsDirectorate. Project manager Mr Guy Robinson is confident that the EC technology experts will give the scheme the green light after they see the containers being off-loaded from the train to lorries to continue their journey. Over the past six weeks ateam has been tracking regular road-and-rail container journeys between Denmark and Italy. Cab computers pinpoint the location of each container to within a few feet, even in unconventional spots such as tunnels and port terminals. On-board sensorscan alert customers, shippers and cargo handlers to internal changes, such as humidity, temperature and vibrations. They also give early warnings of break-ins or unauthorised movements. The heart of the cargo tracking system, called TRACAR, is aninexpensive plastic "tag" that carries a microchip bearing data of each cargo's unique identity and characteristics. The secure system uses a combination of global positioning technology, short wave rad≩o and mobile phones. Through computer terminalscustomers can keep a friendly eye on the cargo throughout its journey. The equipment is also currently under test for sea journeys, although the project was initially started to monitor perishable foods and hazardous materials. Now customers areclamouring for tailor-made options, such as assessing fuel consumptions or drivers' hours. The system already gives pinpoint accuracy in finding containers within massive terminal storage areas. Mr Robinson said: "Present TRACAR technology can give upto 32 options. "The system can, for example, track the Eurostar - travelling around 270 kilometres an hour - to within a centimetre. "The technology therefore gives safety benefits by pinpointing exactly where the train is, for example, in the ChannelTunnel. "A trackside tag system could be developed at a fraction of the present pounds 10,000 cost of a conventional system." Danish firm T.S.S. developed the low-frequency passive "tag" system.

Your search did not find any articles. These tips can help:

- Verify the correct spelling of your search terms.
- If you're searching "Citations and Abstracts", try the same search in "Article text".
- If you're searching Current (years), try the same search against the Backfile or vice-versa.
- If you're searching only one or two collections, use <u>Change Collection</u> to add another or search ALL available collections.
- Remove any limit to Full text articles or Peer reviewed.

Define your accreb. Enter a word, words or analife abress

- If you're using <u>Basic</u> or <u>Guided Search</u>, don't enter a question or long sentence. Instead, use the AND operator to link important words of the sentence together. For example, instead of *What is the largest continent on Earth?*, search for *largest AND continent AND earth*.
- Use Natural Language Search to enter a question in everyday English.
- Use the Topic Search to find articles relevant to what you are looking for.
